## **SFS Mesh silo**

**(Kiwa certificate number 55381)**

The SFS Mesh silo can be used for manure storage, amongst other things. The volume can vary from 192 m<sup>3</sup> to 1246 m<sup>3</sup> and the silo height is 3 metres as a standard feature.

## **Technical specifications**

The silo consists of a galvanised exterior positioned on tiles. The interior is equipped with 1 ½ mm thick HDPE foil to protect the liner. This silo is finished with a floating cover as a standard feature. The lining and floating cover are available in various foil types. The silo is emptied through the discharge- / filling point, the 250 mm pipe is located beneath the silo or over the edge, the connection is 6" or 8". This is based on the requirements / on what is allowed.

## **Kiwa / Komo Certification**

We are one of the few suppliers with a Kiwa / Komo certificate for our systems. This is achieved in accordance with Eurocode. You can locate our certificates on the Kiwa website under BRL 2342.

## **Warranty**

**SFS Foil systems:**

- 5-10 year, depending on the situation

## **Inspection**

Legal inspection requirements in the Netherlands.

We recommend that you also adhere to these requirements outside of the Netherlands, for a system which will function properly for years to come.

## **Advantages**

- Suitable for use on a surface with less carrying capacity.
- No concrete floor, foundation required.
- Easy to install and move.
- Short construction period.

## **Mix options**

- Mix hatch
- Rotatable stainless steel nozzle, adjustable from the side.
- Mixer through the wall
- Electric mixer

## **Everything under one roof**

Working with our own assembly team or assembly under supervision, and using a supporting committee for the application of building permits and / or environmental irregularities. We relieve you of all your concerns!
