

To Whom It May Concern,

I hope you do not mind me writing to you, but as a local famer I believe that the below may be of some interest.

ARK Agriculture specialise in the construction of silage clamps using our unique sloping wall system (more information on this is available in the attached flier).

Recently ARK Agriculture has partnered with PJ Brown (Civil Engineering) Ltd which has enabled us to offer our silage clamps at a significantly discounted rate.

How?

ARK Agriculture employs a unique and patented sloping wall silage clamp system, built with earth banks. Using the sloped wall system has several advantages over the more conventional vertical wall clamps, including greater compaction and less waste.

PJ Brown are actively looking for sites in which to re-use and re-purpose clean, naturally occurring materials (clay for the most part) that arise from development sites in and around the London area. These materials provide the perfect support for the ARK silage clamps.

There is a country-wide push for the recovery and re-use of said materials, coupled together with ever increasing EA regulations and NE clean water strategy. Using earth banked silage clamps provides the ideal, cost-effective solution to these problems as well as a host of others including the overuse of landfill, effluent control, H&S all the while solving one of the more problematic aspects of planning permission i.e. it's expense.

What this means

This means that the cost of the silage clamp can be covered by the importation and the reuse of these materials; your farm will benefit from a new, environmentally friendly silage clamp that is compliant with all EA regulations and comes at no cost to yourself or your farm. This will not only improve the quality of silage but will result in an increase in overall efficiency and operator safety.

If any of the above is of interest, please call me (Will Wilson) at ARK Agriculture on 01206 585090 to talk through this opportunity more thoroughly.

Best Regards,

Will

Will Wilson
